

## Haystax for Safety & Security – 10/14/19 – Release Notes

*Update v2.3.7 (10407)*

### Assessments

- Resolved problem that prevented saving single/multi select assessment question choices that contained periods

### Incidents

- New Combined Incidents and Field Report roll-up report that includes an Incident List, Field Report List, and then presents each Field Report in full detail (one by one) for reporting out on activity that occurred during an operational period. Available on Incident List and Field Report List pages.
- Create New Incident now defaults Date to current date/time to expedite the time it takes to create a new incident

### Field Reports

- New Field Report date/time filter allows the user to filter the Field Report List by date and time
- New Combined Incidents and Field Report roll-up report that includes an Incident List, Field Report List, and full Field Report Detail (one by one) for reporting out on activity that occurred during an operational period. Available on Incident List and Field Report List pages.

### General / Administration

- Fixed bug with “Unknown data group” display sometimes appearing in Permissions
- Upload Photo now supports multiple tags
- New session expiration pop-up dialog to allow user to save data if session timeout will occur soon

### Security Enhancements

- New ability to automatically disable inactive user accounts after a specified time period. By default, this mode is turned off. This setting is managed per tenant by Haystax Support. Contact Haystax Support at [support@haystax.com](mailto:support@haystax.com) to learn more.
